SPECS™

A detailed illustration of a molecular structure, possibly a carbon nanotube or a similar nanoscale material, rendered in a grayscale, semi-transparent style. The structure is composed of many small spheres (atoms) connected by lines, forming a long, curved tube. In the background, there are faint, circular patterns and lines, suggesting a scientific or technical context.

Forces and Photons in Molecular Junctions

Berlin, 23-25 September 2013

Introduction

The electronic and optical properties of matter are considerably changed due to quantum effects when the size of the objects is reduced to atomic-scale dimensions. The focus area NanoScale “Functional Materials at the Nanoscale” in the Freie Universität Berlin, aims at a profound understanding of these properties and to develop functional materials (in particular consisting of organic molecules) which may lay the basis for future nanotechnology.

This workshop will bring together experts from two communities investigating properties of single-molecule junctions: the first one investigates the electronic properties and mechanical flexibility of molecules by using a combination of scanning tunneling microscopy (STM) and atomic-force microscopy (AFM). Whereas STM is a standard tool for electronic structure determination with atomic-scale precision, AFM has recently been shown to provide information of electrostatic potentials with unprecedented resolution. This information is crucial for the design of molecular junctions with specifically desired conductance properties. Furthermore, the combination of STM and AFM provides insight into the flexibility and mechanical stability while a current is flowing through the molecular junction.

The second community investigates the optical properties of nanoscale junctions by a combination of light spectroscopy and STM. The light emission from molecule-metal junctions gives insights into the plasmon spectrum of the nanoscale cavity and its interaction with the molecule placed inside the junction. The interplay of electronic excitations and light forms a basis for the development of optical devices.

Both communities have recently shown rapid progress towards the understanding of elementary processes in single molecules at the atomic-scale. This knowledge provides a basic playground for design strategies of nanoscale devices - a vision also pursued within the focus area NanoScale.

This workshop aims to unify the two scientific communities in light and atomic force spectroscopy which up to date are unrelated, despite the common field of research through the combination with scanning tunnelling microscopy.

	Monday	Tuesday	Wednesday	
9:00		R. Berndt Meandering with STM and light	S. Sadewasser Spatially resolved surface photovoltage spectroscopy

19:00	Posters Snacks and Drinks			
20:00		Dinner		

Oral Presentations:

Monday Afternoon

14:30-15:15 **Franz. J. Giessibl**

Atomic forces, currents and spins measured by simultaneous STM and AFM

15:15-16:00; **Alexander Schwarz**

Forces, Tips, Cantilevers and Light

16:30-17:15; **Markus Heyde**

The Impact of Atomic Force Microscopy and Spectroscopy to Illuminate Complex Oxide Surfaces

17:15-17:35; **Fernando Stavale**

Cathodoluminescence spectroscopy using a STM: A powerful tool for nano-oxides characterization

17:35-18:00; **Zsolt Majzik**

Simultaneous AFM and STM analysis of surface reactions on silicon surfaces

Tuesday Morning

9:00-9:45 **Richard Berndt**

Meandering with STM and light

9:45-10:30; **Javier Aizpurua**

Nanooptics in subnanometric gaps: from single molecule imaging to quantum tunneling plasmonics

11:00-11:45; **Markus Ternes**

The mechanical properties of a monoatomic layer investigated by combined STM and AFM measurements

11:45-12:30; **Pavel Jelinek**

AFM/STM measurements of atomic and molecular contacts

Tuesday Afternoon

14:30-15:15 **Christoph Grosse**

Exploring luminescence on submolecular length scales and nanosecond time scales

15:15-15:35; **Christian Lotze**

Fundamental Processes in Single Molecule Junctions: Interplay of Forces and Electronic Effects

15:35-16:00; **Jingcheng Li**

Tunneling electrons induced light emission in electronic systems

16:30-17:15; **Jascha Repp**

Dynamic Force Microscopy and Spectroscopy of Individual Molecules on thin insulating films

17:15-18:00; **Shigeki Kawai**

Mechanical properties of a single long molecular wire

Wednesday Morning

9:00-9:45 **Sascha Sadewasser**

Spatially resolved surface photovoltage spectroscopy

9:45-10:30; **Ruslan Temirov**

How much control over single molecules could we get with the junction of a scanning probe microscope?

11:00-11:45; **Stefan Fölsch**

Manipulating atoms and molecules on a III-V semiconductor surface by cryogenic STM

11:45-12:30; **Gerhard Meyer**

Scanning probe microscopy of single molecules on insulating films: Molecular geometry and intramolecular charge distribution

Posters:

Gelavizh Ahmadi

Monitoring a ring-closure reaction on the ligand of an Fe-Porphyrin Molecule

Wibke Bronsch

Self-assembling and electronic structure of metallocenes on Pb(111) and Pb(100)

Robert Drost

The interface of graphene with hexagonal boron nitride

Nino Hatter

Diarylethene molecules on a Ag(111) surface: stability and electric field-induced switching of single molecules

Nils Krane

Charge Localization in Merocyanine on Au(111)

Jesús Martínez Blanco

STM light emission from the InAs(111)A surface: First Results

Marten Piantek

Manipulation of the electronic structure in a Ruthenium complex by an STM/AFM tip

Celia Rogero Blanco

Reshaping of Cu(110) by phthalocyanine molecules

Michael Ruby

Electron Momentum Anisotropy in Superconducting Tunnel Junctions

Fabian Schulz

Local doping and lifetime modulation of molecular electronic states on monolayer hexagonal boron nitride

Evan Spadafora

Simultaneous nc-AFM/STM investigation of the B:Si(111) $\sqrt{3}\times\sqrt{3}$ surface

Paul Stoll

Bistable charge states in the acceptor-donor complex Tetracyanoethylene-Tetrathiafulvalene on Au(111)

Martina Svec

Highly ordered silicon triplets within a platinum surface alloy

Tobias Umbach

Charge distribution of alkali-organic monolayers on a metal surface

Ben Warner

Exploring the magnetic properties of metallophthalocyanines on a thin insulator

Ping Yu

Nanoscale photoelectron mapping and spectroscopy with an atomic force microscope

Yang Zechao

Gold-Adatom-Mediated Bonding and Molecular Orbitals of Self-Assembled DCV5T-Me₂ Nanostructures on Au(111)

List of Participants:

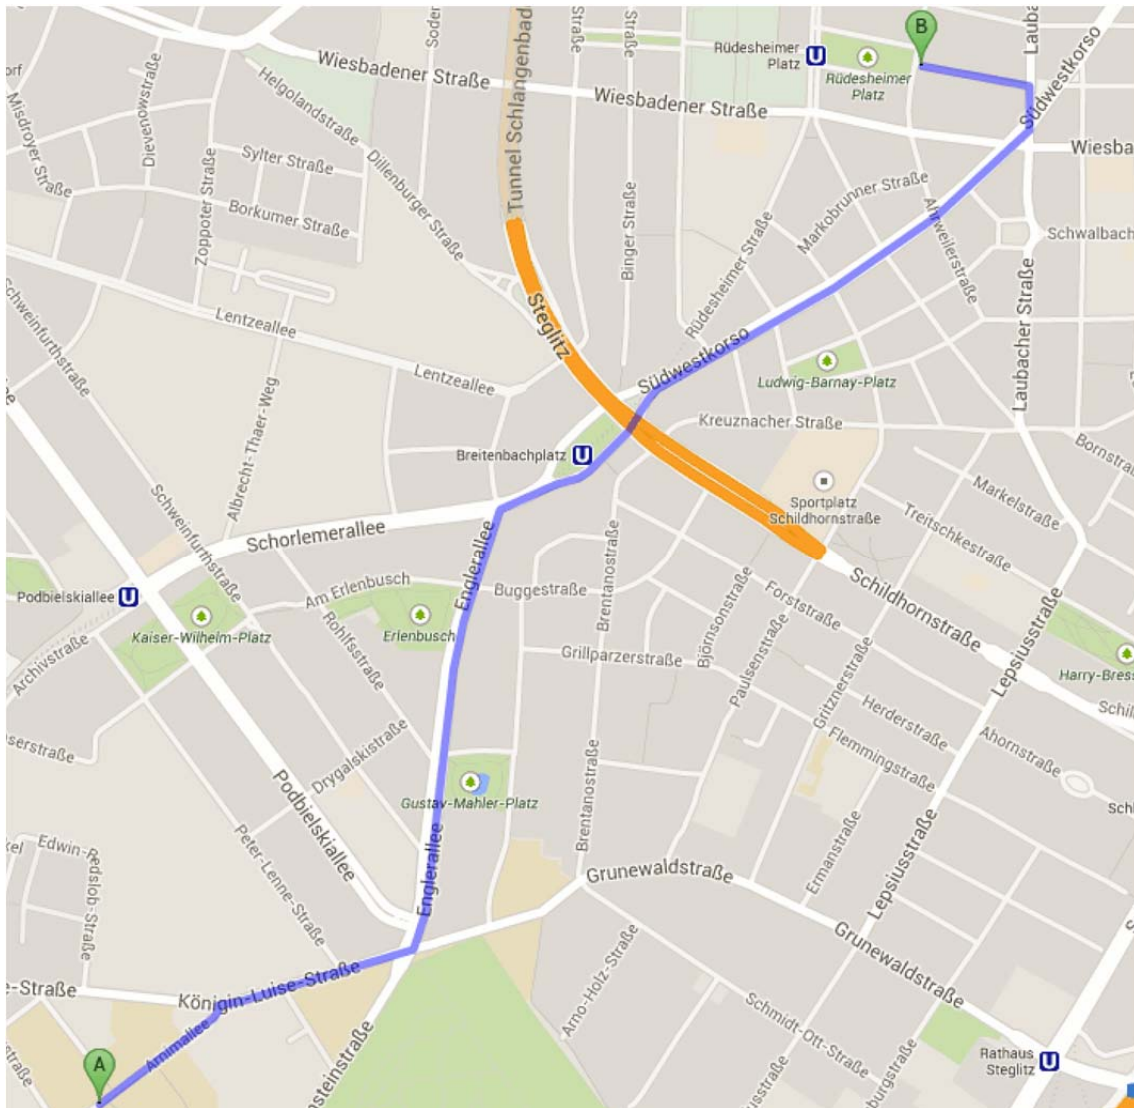

Gelavizh Ahmadi	Department of Physics, Free University Berlin (Germany)
Javier Aizpurua	Center of Material Physics, San Sebastián (Spain)
Richard Berndt	Institute of Instrumental and Applied Physics University of Kiel (Germany)
Wibke Bronsch	Department of Physics, Free University Berlin (Germany)
Bo Chen	Department of Physics, Free University Berlin (Germany)
Rory Chen	Department of Physics, Free University Berlin (Germany)
Martina Corso	Center of Material Physics, San Sebastián (Spain)
Robert Drost	Department of Applied Physics, Aalto University School of Science (Finland)
Stefan Fölsch	Paul Drude Institut für Festkörper Elektronik, Berlin (Germany)
Isabel Fernandez Torrente	Department of Physics, Free University Berlin (Germany)
Katharina J. Franke	Department of Physics, Free University Berlin (Germany)
Lukas Gerhard	Karlsruhe Institute of Technology (Germany)
Franz J. Giessibl	Department of Physics, University of Regensburg (Germany)
Toby Gill	London Center for Nanotechnology (UK)
Christoph Grosse	Max Planck Institute for Solid State Research, Stuttgart (Germany)
Nino Hatter	Department of Physics, Free University Berlin (Germany)
Benjamin Heinrich	Department of Physics, Free University Berlin (Germany)
Markus Heyde	Fritz-Haber-Institut der Max-Planck-Gesellschaft, Berlin (Germany)
Pavel Jelinek	Institute of Physics of Czech Academy of Science, Prague (Czech Republic)
Shigeki Kawai	Institute of Physics, University of Basel (Switzerland)
Nils Krane	Department of Physics, Free University Berlin (Germany)
Janina Ladenthin	Fritz-Haber-Institut der Max-Planck-Gesellschaft, Berlin (Germany)
Jingcheng Li	CIC-nanoGUNE, San Sebastián (Spain)
Christian Lotze	Department of Physics, Free University Berlin (Germany)
Zsolt Majzik	CIC-nanoGUNE, San Sebastián (Spain)
Jesús Martínez Blanco	Paul Drude Institut für Festkörper Elektronik, Berlin (Germany)
Jose Martinez	Instituto de Nanociencia de Aragón, Zaragoza (Spain)
Gerhard Meyer	IBM, Zürich (Switzerland)

J. Ignacio Pascual	CIC-nanoGUNE, San Sebastián (Spain)
Olof Peters	Department of Physics, Free University Berlin (Germany)
Marten Piantek	Instituto de Nanociencia de Aragón, Zaragoza (Spain)
Jascha Repp	Department of Physics, University of Regensburg (Germany)
Celia Rogero Blanco	Center of Material Physics, San Sebastián (Spain)
Michael Ruby	Department of Physics, Free University Berlin (Germany)
Sascha Sadewasser	International Iberian Nanotechnology Laboratory, Braga (Portugal)
Fabian Schulz	Department of Applied Physics, Aalto University School of Science (Finland)
Alexander Schwarz	Department of Physics, University of Hamburg (Germany)
Violeta Simic	SPECS, Berlin (Germany)
Evan Spadafora	Institute of Physics of Czech Academy of Science, Prague (Czech Republic)
Fernando Stavale	Brazilian Center for Physics Research, Rio de Janeiro (Brazil)
Paul Stoll	Department of Physics, Free University Berlin (Germany)
Martin Svec	Institute of Physics of Czech Academy of Science, Prague (Czech Republic)
Ruslan Temirov	Forschungszentrum Jülich (Germany)
Markus Ternes	Max Plank Institute for Solid State Research, Stuttgart (Germany)
Tobias Umbach	Department of Physics, Free University Berlin (Germany)
Ben Warner	London Center for Nanotechnology (UK)
Ping Yu	Department of Physics, University of Regensburg (Germany)
Yang Zechao	Department of Physics, Free University Berlin (Germany)

Workshop Dinner:

Gasthaus Landauer
Landauer Strasse 8
147197 Berlin

Restaurant

FU workshop site
